

RENOVATION OF KITCHEN

Transformation from outdoor to clean indoor kitchen

Project overview

The previous open-air kitchen has been successfully transformed into a fully enclosed indoor facility equipped with new windows, a secure door, functional kitchen cabinets, and spacious work surfaces. Additionally, the building has been connected to a reliable water supply and electricity.

Before

Prior to the renovation, the kitchen was merely an outdoor shelter protected by only two walls and a basic roof, which made cooking during severe weather conditions an immense challenge. Due to the complete lack of work surfaces, all food preparation had to be done on the floor, and all cooking equipment had to be stored in other rooms of the orphanage.

After

The newly enclosed kitchen building now provides complete protection against wind and rain while offering a secure environment that prevents the children from getting too close to the wood-fired stove. With the installation of custom kitchen cabinets, all cooking utensils can now be stored exactly where they are needed, and the new door can be locked to keep out children and roaming pets whenever necessary.

Project data

- **Location:** Likoni AID for Children Centre
- **Project budget:** 260.000 KeS
- **Approximate value:** 1.800 Euro / 2.100 USD
- **Execution:** March 2026

Impact

Sheltered and clean conditions for cooking and increased safety for the kids.
